

WHERE LEARNING IS AN ADVENTURE!

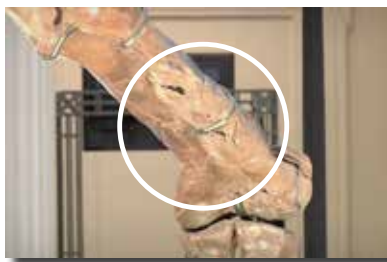

At the Field Museum of Natural History, Sue the T-Rex comes along once every million years or so.

Did Ya KNOW?

There are over 30 million historical artifacts stored at the museum.

Sue is the largest fossilized Tyrannosaurus Rex on display in the world. Paleontologists estimate that she was around 28 years old when she died.

The skeleton of Sue shows many broken bones and large skeletal holes that may have been caused by a serious bone infection.

The much larger Titanosaur taking Sue's place in the Great Hall is 125' long. That's almost 3 times longer than Sue!

Xtra Fun, Xtra Credit!

For adventurers 9+

Compare The Weights

Fossils of all sizes have been discovered. From the 25 lb. dog sized Dilong to the T-Rex weighing in at 8 tons. Compare the weight of a domestic cat to an African Lion and a Goldfish to a Beluga Whale. Do your research on-line.

Learn About The Living Dinosaurs

Birds are considered to be the only survivors of the dinosaur era. Compare the skeletons of birds and dinosaurs. List the similarities and the differences.

Build It, Test It, Learn It!

Here's a fun Dinosaur project from our Museum Access Education curated collection. To purchase this toy click the link below this document.
